

01_Brainstorming_And_Ideation

Project Title

Implement Client Script & UI Policy (Incident)

Problem Statement

In ServiceNow, users sometimes enter incomplete or incorrect incident details in the Incident form. This causes delays in resolving incidents.

Project Idea

Use Client Scripts and UI Policies to automatically validate user input and show, hide, or make fields mandatory.

Objectives

- Make mandatory fields fill correctly.
- Show or hide fields when needed.
- Reduce user mistakes.
- Improve the incident creation process.

Benefits

- Faster incident submission.
- Better data accuracy.
- Easy for users to fill the form.
- Saves IT support time.

Simple Idea Flow

Employee opens Incident Form → Client Script checks input → UI Policy shows/hides or makes fields mandatory → Incident submitted successfully.
