

Implement Client Script & UI Policy (Incident)

Project: ServiceNow Incident Management Optimization | **Phase:** 03 - Project Design

1. Introduction

This project uses Client Script and UI Policy in ServiceNow to make the Incident form smarter by validating input and automatically showing, hiding, or making fields mandatory.

2. System Architecture

User opens Incident Form → Client Script checks input → UI Policy changes field behavior → ServiceNow saves incident

Explanation:

- User opens the Incident Form.
- Client Script checks the user's input.
- UI Policy changes field behavior (show, hide, mandatory).
- ServiceNow saves the incident.

3. Workflow Diagram

Open Incident Form → Enter details → Client Script validates data → UI Policy updates fields → Submit Incident → Incident created successfully

Workflow:

- Open Incident Form.
- Enter details.
- Client Script validates data.
- UI Policy updates fields.
- Submit Incident.
- Incident is created successfully.

4. UI Design

The Incident form contains:

- Short Description
- Category
- Priority
- Assignment Group
- Submit button

5. Design Advantages

- Easy to use
- Reduces user mistakes
- Faster incident creation
- Improves data accuracy
