

Implement Client Script & UI Policy (Incident)

Project: ServiceNow Incident Management Optimization | **Phase:** 05 - Project Development

1. Introduction

This project uses Client Script and UI Policy to improve the Incident form in ServiceNow. The form becomes easier to use by validating user input and changing field behavior automatically.

2. Development Steps

- Open ServiceNow.
- Create or open the Incident form.
- Create a Client Script.
- Create a UI Policy.
- Test the form.

3. Client Script Example

Purpose: Show an alert if the Short Description is empty.

```
function onSubmit() {
    if (g_form.getValue('short_description') == '') {
        alert('Please enter a Short Description.');
```

4. UI Policy Example

Create a UI Policy with these settings:

Setting	Value
Table	Incident

Condition	Category = Hardware
Action	Make Assignment Group mandatory

5. Screenshots to Upload

Take these screenshots and upload them to this folder:

- Incident Form
- Client Script
- UI Policy
- Validation Result

6. Expected Output

- Short Description is validated.
- Assignment Group becomes mandatory for Hardware category.
- Incident is submitted successfully after validation.
