

Implement Client Script & UI Policy (Incident)

Project: ServiceNow Incident Management Optimization | **Phase:** 07 - Project Documentation

1. Abstract

This project improves the Incident form in ServiceNow using Client Script and UI Policy. It validates user input, makes important fields mandatory, and reduces mistakes during incident creation.

2. Objectives

- Validate user input.
- Make required fields mandatory.
- Improve the Incident form.
- Reduce incorrect submissions.

3. Tools Used

- ServiceNow
- JavaScript (Client Script)
- UI Policy

4. Working Process

User opens Incident Form → Client Script checks data → UI Policy updates field behavior → Incident submitted successfully

- User opens the Incident form.
- Client Script checks the entered data.
- UI Policy changes field behavior.
- The incident is submitted successfully.

5. Results

- The form prevents incomplete submissions.
- Mandatory fields are enforced automatically.
- Users can create incidents more easily.

6. Conclusion

The project successfully demonstrates how Client Scripts and UI Policies improve the ServiceNow Incident form by making it more user-friendly and accurate.
